COMPLETE VISIBILITY AUDIT

Mi Clip.

Found, but mistaken for Clip.

What Google and AI show today when someone in Mexico asks how to pay with their phone.

SEO	GEO	AEO
Low	34 of 100	Critical

Two parts: the context, then the audit.

FIRST, A SCENE

People don’t search the way they used to.

Before.

If you wanted to pay without cash, you’d open Google, type two or three words and work your way down a list of links. You’d open a few sites, read some reviews and make up your mind. If you were on that list, you existed.

Today.

Now the same person asks an AI one full question: which app can I use in Mexico to pay with my phone, no card, no cash? There’s no list of ten links. Just one answer, with two or three names in it.

That shortlist is the new first page.

53%

of consumers across 11 markets have used AI to shop in the past three months

29% vs 9%

of AI shoppers say AI tools, not traditional search, most influenced their latest purchase

8%

of visits with an AI summary end in a click on a result, vs 15% when there isn’t one

FROM ANSWERS TO PURCHASES

First it answered. Then it started shopping.

AI shopping took off in the US first. Within months, the assistant that used to just answer questions was browsing stores, comparing prices and checking out once the user said yes. Now every platform wants to own the moment the question gets asked.

SEPTEMBER

Muse launches in the US.

Meta's personal agent browses, compares and buys for you, and asks before it pays.

SEPTEMBER

Amazon blocks it.

Twelve days after launch, Amazon cuts Meta's agent off from its store.

SEPTEMBER

Retailers sign on.

Walmart, Best Buy, Sephora, Ulta and Wayfair join Muse as partners in the US.

NOVEMBER

Muse launches in Mexico.

The first country in Latin America to get it. This isn't happening somewhere else anymore.

NOVEMBER

Amazon launches its own.

A day later, invited US customers start shopping by text with Alexa for Shopping.

THEN IT CAME TO MEXICO

Mexico isn’t sitting this one out.

Online shopping was already routine in Mexico. People browse on their phones, compare stores and pay by SPEI, in monthly installments or in cash at the corner store, then pick up their orders wherever it’s easiest. Now AI has arrived on top of all that, all at once: in Spanish, and inside WhatsApp.

MX$941 bn
online retail sales in Mexico last year

77.2 M
digital shoppers in the country

17.7%
of all retail sales already happen online

THE FIRST BRANDS ON MUSE IN MEXICO

- Cinépolis
- Despegar
- Kueski
- Rappi
- Coppel
- Kavak
- Liverpool
- Walmart México

With Muse, it all happens in one conversation: compare prices across stores, track a package, check a flight, buy movie tickets. And one detail matters for everyone else: the country’s two biggest marketplaces aren’t on it. The field is wide open.

You can’t buy your way in, and nobody can guarantee a spot. It comes down to one thing: when someone asks, does the AI name you, and does it get you right?

THE JOURNEY, STEP BY STEP

Five steps. An answer decides each one.

1 **It starts with a question.**

Nobody starts with a brand name. Which app is best in Mexico if I don't carry cash? How do I get paid? In Mexico this happens on a phone, and more and more often inside WhatsApp.

2 **AI answers with a shortlist.**

Two or three names, not ten links. If your brand isn't in that answer, you were never in the running.

3 **It compares whatever it can find.**

Prices, fees, limits, cashback, proof it can be trusted. If what you publish is thin or confusing, the assistant fills the gaps with what third parties say about you, or leaves you out.

4 **It buys, once you say yes.**

Agents already check out once the user approves. What they found in steps one to three decides what gets bought in step four.

5 **Trust gets checked in public.**

Regulation, reviews, what real people say. A 4.5-star rating from a thousand reviews carries more weight than any tagline.

Brands don't lose at checkout. They lose at the answer, before the journey has really started.

WHY EVERY ENGINE MATTERS

There’s no single front door anymore.

People don’t ask in just one place. Someone asks ChatGPT today, sees an AI summary on Google tomorrow, asks Meta Muse inside WhatsApp the day after and asks Alexa for Shopping what to buy next week. Each engine builds its answer from different sources, at different times.

ChatGPT · Gemini · Perplexity · Claude

Google AI Mode · Google AI Overviews

Copilot · Grok · Meta AI

Meta Muse · Alexa for Shopping

That’s why visibility is no longer just about rankings. It’s about whether your brand shows up in the answer, and shows up correctly. Being named isn’t enough: if AI describes you as the business product when you’re the consumer one, then for the people you’re trying to reach, you don’t exist.

That’s the context. What follows is different: hard data on one brand.

PART TWO

Now,
Mi Clip.

What Google and AI show today when someone in Mexico looks for a wallet to pay with their phone.

EXECUTIVE SUMMARY

A good product, read the wrong way.

Mi Clip is Grupo Clip's consumer wallet. You can pay with your phone by QR or tap, send and receive money, pay bills, buy phone top-ups, ride public transit and earn cashback. The product isn't the issue. The problem is that people and Google keep mixing it up with Clip, the business brand everyone knows: most of its search traffic comes from people looking for Clip's business products. AI describes it correctly when asked by name, but rarely brings it up on its own. And almost all of its organic visibility depends on a single page.

154
organic visits per month

217
organic keywords

34 / 100
AI visibility, 5 citations

0 of 34
pages with a direct answer

PILLAR	LEVEL	IN ONE LINE
SEO	Low	It ranks for business searches, not consumer ones.
GEO	Below average	AI describes it correctly. It just rarely mentions it.
AEO	Critical	Not one page answers a question in a way AI can quote.

THE THREE ROOT CAUSES

- **1. Entity confusion.**
  Mi Clip, the wallet for people, and Clip, the card readers and payment tools for businesses, show up for the same searches, so Google and people treat them as one brand.
- **2. One page carries everything.**
  181 of the 183 keywords that bring in traffic land on the homepage. Google indexes the site, but AI has almost nothing on it to quote.
- **3. No answers, no entity signals.**
  Zero pages with a direct answer, no official profiles linked in the markup, and one FAQ trying to speak to businesses and consumers at once.

WHAT'S ALREADY WORKING

The foundation isn't the problem.

Nine things already working in Mi Clip's favor, based on what it publishes today.

- **Open to crawlers.**
  robots.txt blocks only three paths and declares the sitemap. Nothing here needs to be built from scratch.
- **A known name behind it.**
  Backed by the Clip name, miclip.mx already has 38 keywords in the top 10. Mi Clip starts with recognition most new wallets don't have.
- **Links are growing fast.**
  Backlinks jumped from 68 to 564 in three months, and referring domains from 7 to 26.
- **Traffic is growing.**
  Estimated organic traffic rose from 85 to 154 visits a month over the same period, up 81%.
- **Solid legal standing.**
  Operations run through Clip AI, S.A. de C.V., an authorized IFPE supervised under Mexico's Fintech Law. In a regulated category, that's credibility that good design alone can't buy.
- **The site already makes the distinction.**
  It already says Mi Clip is the payments app for people. The definition exists; it's just buried in an FAQ.
- **A strong app store reputation.**
  4.5 stars on Google Play from more than a thousand reviews. Third-party proof that AI can read today.
- **Already appearing in discovery searches.**
  It already shows up for searches like best payment app in Mexico, just outside the top 10. The intent it needs to win is within reach.
- **A real product story.**
  QR and contactless payments, transfers, bills, top-ups, transit and cashback. The raw material for quotable content is all there.

The takeaway: Mi Clip doesn't need anyone's permission to get cited. It needs clear pages and a clean break from its business sibling.

1. SEO: THE LANDSCAPE

The smallest in the group. Barely in the race.

On every organic metric, Mi Clip is the smallest of the digital wallets compared here. But look at who it's up against: digital accounts with years of content and millions of users. Mi Clip appears on the same results pages with almost no content of its own.

DOMAIN	AUTHORITY SCORE	TRAFFIC	KEYWORDS	BACKLINKS	REF. DOMAINS
miclip.mx	17	154	217	564	26
mercadopago.com.mx	56	570,952	77,357	10,450,259	9,465
nu.com.mx	45	128,107	10,688	21,881	1,568
spinbyoxxo.com.mx	43	97,743	7,348	14,813	3,690

SHARE OF COMBINED TRAFFIC

71.6%
Mercado Pago

16.1%
Nu

12.3%
Spin by OXXO

< 1%
Mi Clip

The trend matters too. Over three months, Mercado Pago's estimated traffic fell 24%, Nu's grew 23% and Spin's dropped 9%. The leader is losing share, not gaining it. In a market moving like this, a small player can grow fast if it picks its battles.

Mi Clip's own traffic value nearly quadrupled over the same period, from $495 to $1,899. Small base, fast growth.

1. SEO: VALUE, AUTHORITY AND PAID

Thin authority. And nobody bidding.

DOMAIN	TRAFFIC VALUE (USD)	3-MONTH TREND
miclip.mx	495 to 1,899	Up 3.8x
mercadopago.com.mx	1,600,000 to 1,430,000	Falling, still huge
nu.com.mx	413,000 to 431,000	Up slightly
spinbyoxxo.com.mx	181,000 to 171,000	Falling

AUTHORITY, THE LONG GAME

Mi Clip has 26 referring domains. Nu, the weakest competitor on this metric, has about 60 times as many. Even with eight times as many referring domains, Mi Clip would still be well behind. That gap is years of accumulated authority, and nothing in this plan depends on closing it. It depends on answering specific questions better than anyone else, and on the mentions that content earns.

PAID SEARCH, FOR CONTEXT

Mi Clip and Spin by OXXO show no paid keywords. Mercado Pago, the only big spender back in August, went from 52 paid keywords to zero by November. Nu runs just three, at an estimated $945 a month. For these searches, the ad auction is practically empty.

This space is won organically. Whoever publishes the best answer takes it, because nobody is paying for it.

2. KEYWORDS: WHAT IT RANKS FOR TODAY

Its top searches are for someone else’s product.

Mi Clip’s highest-volume keywords belong to the other product: card readers, fees and fee calculators for businesses. It ranks, just for the wrong audience. None of its top 10 positions match a wallet, payments, cashback or transfer search. The terms below are shown exactly as people type them in Mexico.

KEYWORD	MONTHLY SEARCHES	POSITION
clip	90,500	14
calculadora clip	12,100	35
clip comisiones	9,900	33
clip terminal	6,600	15
clip mexico	1,900	8

Even its best positions lean toward business: Clip for business content and app download terms take positions 3 to 9. Its one true consumer ranking, best payment app in Mexico, sits just outside the top 10.

THE CONCENTRATION, IN ONE NUMBER

181 of the 183 keywords that bring in traffic land on one page: the homepage, miclip.mx/. The issue isn’t content spread too thin across the site. One page carries the whole domain, and that page mixes two products.

Every new quotable URL takes weight off the homepage and gives Google and AI one clear page per question.

3. THE GAP: WHAT IT DOESN'T RANK FOR

42,139 keywords. 79% are informational.

The gap analysis takes everything Mercado Pago, Nu and Spin by OXXO rank for in Mexico and checks it against miclip.mx. What's left is 42,139 keywords where the category is already visible and Mi Clip barely shows up.

INTENT	KEYWORDS	MONTHLY SEARCHES
Informational	33,382	15,728,160
Navigational	5,026	6,353,480
Commercial	3,023	923,840
Transactional	708	318,680

Four out of five of these keywords come from people looking for how to do something: pay, top up, transfer, deposit. Not brand names, but instructions. That's exactly the kind of content answer engines quote, and the part that matters most to Mi Clip falls into the ten clusters on the next two pages.

20,132

keywords at difficulty 0 to 30, the range within reach of an Authority Score of 17

3. THE GAP: 10 OPPORTUNITY CLUSTERS

631,710 searches a month. Mi Clip isn't in the top 10 for any of them.

The gap keywords that matter most fall into ten topics, and each one maps to something Mi Clip already does: pay by QR or contactless, top up, pay bills, send money, earn cashback. Here are the first four, with the terms as people type them in Mexico.

CLUSTER 01

Top-ups: Telcel, AT&T, Movistar, Unefon

345,980 searches/mo

recargas	40,500
recarga telcel	27,100
recargas telcel	22,200
recargas at&t	9,900
recarga movistar	8,100

CLUSTER 02

Transfers and SPEI

134,870 searches/mo

iban mexico	12,100
que es spei	9,900
rastreo spei	6,600
como transferir dinero	5,400
cual es mi clabe interbancaria	5,400

CLUSTER 03

Bill payments: CFE, Telmex, water, Izzi

59,000 searches/mo

pagar agua	14,800
pagar agua en linea	8,100
pagar cfe en linea	4,400
pago cfe	3,600
pagar recibo de luz	3,600

Mercado Pago, Nu and Spin own this cluster today. It has real buying intent, and the feature is already in the app.

CLUSTER 04

Cashback in Mexico

30,150 searches/mo

cashback	12,100
cashback que es	8,100
que es el cashback	4,400
cash back	2,400
como funciona el cashback	1,300

3. THE GAP: CLUSTERS 5 TO 10

The most open door of all: paying by phone.

CLUSTER 05

Adding cash to the account

19,680 searches/mo

depositos en oxxo	14,800
cuanto cobran por depositar en oxxo	1,600
bancos que aceptan depositos en oxxo	1,600

CLUSTER 06

Digital wallets and accounts

14,210 searches/mo

cuentas digitales	4,400
que es una billetera digital	2,900
billetera digital	2,400
cuenta digital	2,400
mejor app de pagos	880

CLUSTER 07

Paying by phone: QR, NFC, contactless

11,380 searches/mo

pagar con el celular	1,600
pagar con nfc	1,300
como pagar con el celular	1,000
como usar nfc para pagar	880
pagar con qr	880

The clearest opening in the whole audit. The best competitor here ranks between positions 12 and 17. Nobody owns paying by phone, and it's the heart of what Mi Clip promises.

CLUSTER 08

Trust and regulation

7,220 searches/mo

es seguro mercado pago	1,300
que es una fintech	1,000
condusef simulador	880
entidades financieras reguladas	720
instituciones de fondos de pago electronico	320

Regulators and banks own this one today. A wallet that explains its own IFPE status in plain words can earn a place in it.

CLUSTERS 09 + 10

Digital cards and Mexico City transit

9,220 searches/mo

tarjeta digital	1,600
como pagar con tarjeta digital	880
tarjeta virtual	880
pagar metro con tarjeta	720
tarjeta movilidad integrada saldo	590

In Mexico City, transit searches belong to Uber, DiDi, Google and Cabify today. They sit right next to paying by phone.

3. THE GAP: WHERE TO START

The easiest wins are already on the map.

Not all 631,710 searches take the same effort. Difficulty runs from 0 to 100, and with an Authority Score of 17 the realistic entry point is 0 to 30. Below are the biggest keywords in and around that range, each tied to a feature Mi Clip already offers. Terms as typed in Mexico.

KEYWORD	SEARCHES/MO	DIFFICULTY	TOPIC
recargas	40,500	22	Top-ups
pagar agua	14,800	26	Bill payments
como pagar con tarjeta digital	880	32	Digital card
depositos en oxxo	14,800	33	Cash deposits
pagar agua en linea	8,100	33	Bill payments
recarga telcel	27,100	38	Top-ups
como usar nfc para pagar	880	n/a	Paying by phone
mejor app de pagos	880	n/a	Discovery

Put simply: one good top-up guide targets a term with 40,500 searches a month at difficulty 22, and a page on paying the water bill targets one at difficulty 26. These aren't long shots. They're questions people ask every day, and the answers ranking today are weak.

Order matters more than volume: first the entity, then how to add money and why it's safe, then use cases. That's the order the roadmap follows.

4. GEO: VISIBILITY IN AI ANSWERS

AI gets it right. It just rarely mentions it.

34 / 100
AI visibility, below average

5
citations found

Neutral
brand sentiment in answers

Ask AI about Mi Clip and the answer comes back with three points: a Mexican digital wallet, QR and NFC payments, and cashback. Accurate, and on message. The description isn't the issue. The issue is that next to Mercado Pago, Nu, Klar and Spin by OXXO, it almost never comes up unless someone asks for it by name.

WHERE THE MODELS GET THEIR ANSWERS

- **Official site, positive tone.**
  The clearest primary source: it says Mi Clip is a consumer wallet and lists NFC and QR payments, sending and receiving money, bills, top-ups and transit.
- **Google Play, neutral tone.**
  Rated 4.5 from more than a thousand reviews. Users praise payments and cashback, and complain about bonuses and support. This is what shapes answers about trust.
- **App Store Mexico, positive tone.**
  Users like how fast bill payments are and being able to spend their cashback. There just aren't many reviews yet.

STRENGTHS AI ALREADY RECOGNIZES

- **A concrete offer.**
  NFC payments on Android, QR at Clip merchants, transfers, bills, top-ups and transit, all in one app.
- **The Clip halo.**
  Borrowed recognition from one of Mexico's best-known fintech brands.
- **Visible legal backing.**
  Run by Clip AI, S.A. de C.V., an IFPE authorized and supervised under the Fintech Law.
- **The site already makes the distinction.**
  It already explains how Mi Clip differs from the Clip app for businesses.

4. GEO: COMPETITORS AND REAL QUESTIONS

In AI answers, Klar is a rival too.

Klar never shows up in the search comparison. In AI answers, it's right there. Your competitors in AI aren't always your competitors in search.

- **Mercado Pago.**
  A giant brand: QR acceptance everywhere, a digital account, bills, transfers, a card, and a huge editorial footprint.
- **Spin by OXXO.**
  A payments account backed by OXXO's store network and brand recognition.
- **Klar.**
  Digital account, card, cashback and interest on savings, with a much bigger public footprint.
- **Nu México.**
  Owns digital accounts and personal finance through brand, educational content and sheer scale.

THE QUESTIONS PEOPLE ACTUALLY ASK

Which app can I use in Mexico to pay with my phone, without a card or cash?

Can I pay CFE and Telmex bills and buy Telcel top-ups with Mi Clip?

Mi Clip or Mercado Pago: which is better for bills and cashback?

How do I add money to Mi Clip, by SPEI or in cash?

Is Mi Clip safe and regulated in Mexico?

Which apps in Mexico give cashback when you pay with your phone?

Can I pay contactless anywhere, or only at Clip merchants?

4. GEO: HOW QUESTIONS BRANCH OUT

One question becomes twenty.

Answer engines don't look up your question word for word. They break it into sub-queries, called fan-outs, and build the answer from all of them. A brand needs a page for the question and for every direction it branches into.

- **How do I pay with Mi Clip?**
  It splits into how to pay with NFC on Android, how to pay with QR and where Mi Clip is accepted. With no content to draw from, answers get vague about how it works and where.
- **Mi Clip or Mercado Pago?**
  It breaks down into bills, SPEI transfers and who gives the best cashback. With no comparison of its own, the models default to Mercado Pago on name recognition alone.
- **Is Mi Clip trustworthy?**
  It splits into whether it's a bank account, who regulates it and what happens to your money. The answer has to separate a bank account from an electronic payment funds account and name Clip AI as the IFPE.

HIGH-PRIORITY IMPROVEMENTS

- **Separate the entity.**
  Draw a clear line between Mi Clip and Clip for businesses everywhere (site, app stores, profiles) so engines stop merging the two.
- **Publish honest comparisons.**
  Own the Mi Clip vs Mercado Pago question instead of leaving it to third parties.
- **Turn features into guides.**
  Each feature becomes an indexable how-to page, not a bullet on the homepage.
- **Document the cashback.**
  Explain it with verifiable examples and lead with the terms, so trust questions get an official answer.

5. AEO: ANSWER ENGINE OPTIMIZATION

0 of 34 pages answer directly.

AEO is about making a page that a search engine or assistant can quote word for word. That takes a page that asks the question the way a person would, then answers it plainly in the first few lines. Of the 34 pages reviewed, not one has a question as a heading followed by a direct answer of 5 to 80 words.

COVERAGE OF THE QUESTIONS THAT MATTER

QUESTION	WHAT EXISTS TODAY	WHAT'S MISSING
What is Mi Clip, and how is it different?	A line in the FAQ	Its own quotable URL
How do I add money to Mi Clip?	The FAQ lists 3 options	A guide with steps and limits
Is it safe? What's an IFPE?	Buried in legal pages	A plain-language explanation
How does cashback work?	A benefits section	An explainer that leads with the terms
Can I pay for public transit with it?	A general claim	A step-by-step guide, once confirmed
How much do cash deposits cost?	A fee table	A short written summary, kept up to date

The good news: most of the raw content already exists. It just isn't packaged as one clear question with one quotable answer per page.

AEO WORK, ON FIVE FRONTS

- **Strategy and topics.**
  Define the wallet, and prioritize paying, adding money and comparison searches.
- **Answer-ready content.**
  Pages on where to use it, how to add money and whether it's a bank account.
- **Structure and markup.**
  Question headings, structured data, and up-to-date promotions, limits and fees.
- **Entity, brand and authorship.**
  The same name and description across the site, Google Play and the App Store, with consistent profiles.
- **Measurement and governance.**
  Monthly tests in ChatGPT, Perplexity and Google AI Overviews, a log of mentions, citations and gaps, and compliance review of every financial text before it goes live.

6. TECHNICAL SEO AND CRAWLING

Nothing to unblock. Five things to clean up.

robots.txt is wide open. Every crawler gets in; only /404, /search and /admin are blocked, and the sitemap is declared. That includes Googlebot and AI assistant crawlers, which follow the same rules.

FINDING	DATA	PRIORITY	EFFORT
Pages with a direct answer	0 of 34	Fix now	A few days
Sitemap pages with no internal links	23 of 33	Fix now	A few days
Official profiles in markup (sameAs)	None	Fix now	Quick
Pages without a title	6 of 34	Worth fixing	Quick
Broken internal links	1 of 39	Worth fixing	Quick

Why it matters: assistants build answers from passages that answer a question head-on. A page nobody links to is hard to find, even if it's in the sitemap. A missing title leaves the page's label to chance. And sameAs links in the markup are how AI confirms that the brand on your site is the same one it sees across the web.

The one broken link, /clip-cuenta, returns a 404 and is linked from the Mi Clip Cuenta terms. The unlinked pages include the English privacy and terms pages. The missing titles are mostly on terms and conditions pages.

The concentration says it all: 181 of the 183 keywords that bring in traffic land on miclip.mx/. Wider visibility means new URLs. Full stop.

7. CONTENT PLAN

Eight pieces. Eight unanswered questions.

Each piece answers one specific question that neither Google nor AI can find answered on the site today. Because this is a regulated financial brand, everything goes through compliance review before it's published, and only figures Mi Clip already publishes are used.

- **1. A definition at the top of the homepage.**
  What Mi Clip is: a quotable definition instead of a slogan.
- **2. Mi Clip vs Clip.**
  How they differ and who each one is for. It settles the entity confusion on its own URL.
- **3. A guide to adding money.**
  SPEI, cash or card, plus the CLABE and the deposit fee. The FAQ, expanded into a real guide.
- **4. Is Mi Clip safe? What's an IFPE?**
  Is it a bank? Who regulates it? Is my money safe? The legal framework in plain words.
- **5. Benefits, with a short summary first.**
  Mi Clip as a cashback app in Mexico, and what users get. It targets discovery searches.
- **6. A public transit guide.**
  Paying for the Metro and Metrobús with your phone, published only once the systems, cities and exact steps are confirmed.
- **7. Fees as a quotable FAQ.**
  Mi Clip Cuenta fees and cash deposit charges, summarized in plain words above the official fee table.
- **8. Cashback explained, terms first.**
  What cashback is and how Mi Clip's works, with the terms up front and no promised amounts.

Beyond these, one guide per use case: paying CFE and Telmex bills, Telcel top-ups and sending money home. Each one covers requirements, steps, limits and a review date.

8. THE 8-WEEK ROADMAP

One quotable piece a week.

Weeks 1 to 7 each end with something ready to publish, cleared by compliance first. Week 8 measures the result. Here's how it would play out, and how each step gets measured.

WEEK 1

Separate the entity, plus the quick fixes.

A consumer app definition, with the same description on the homepage and in the app stores. The same week: official profiles (sameAs) in the markup, the six missing titles and the broken /clip-cuenta link. Measured by the share of Mi Clip's ranking keywords that are consumer searches, not business ones.

WEEK 2

The Mi Clip vs Clip page, plus internal links.

Its own URL with a consumer vs business table, plus links to the 23 sitemap pages nobody links to today. Measured by citations of that page when people ask how the two differ, and by sitemap pages with at least one internal link.

WEEK 3

The guide to adding money.

SPEI, cash and card in one guide. Measured by rankings for searches about adding money and the CLABE.

WEEK 4

Safety and regulation.

Who runs it and what an IFPE is, in plain language. Measured by correct answers about regulation.

WEEK 5

Cashback explained.

A short explainer, terms first. Measured by cashback rankings and AI mentions.

WEEK 6

Fees, in plain words.

Mi Clip Cuenta fees and cash deposit charges as a quotable FAQ above the official fee table. Measured by correct answers about fees.

WEEK 7

Use-case guides.

Bills, top-ups and sending money. Measured by new pages indexed and cited.

WEEK 8

Measurement.

Rerun the fixed set of questions in ChatGPT, Perplexity and Google, and compare the results with the baseline.

9. MEASUREMENT AND BASELINE

Measure progress, not promises.

You can't tell whether visibility moved unless you lock in the starting point and retest the same questions every month. No rankings or figures are promised here. Direction is the metric.

INDICATOR	CURRENT VALUE	WHAT IT MEASURES
AI visibility	34 of 100	How often and how well it appears
AI citations	5	How many answers cite Mi Clip
Organic traffic	154 per month	Estimated visits from search
Organic keywords	217	Keywords with a Google position
Keywords in top 10	38	First-page positions
Referring domains	26	External authority
Pages with a direct answer	0 of 34	Pages with a quotable question and answer
Pages without a title	6 of 34	Basic technical hygiene

A FIXED SET OF QUESTIONS, RUN MONTHLY IN CHATGPT, PERPLEXITY AND GOOGLE AI OVERVIEWS

1. Best payment app in Mexico without cash.
2. An app to pay by phone with QR and contactless.
3. What's the difference between Mi Clip and Clip for businesses?
4. Is Mi Clip safe?
5. How to add money by SPEI, CLABE, cash or card.
6. A cashback app in Mexico.
7. Paying for public transit with your phone.
8. Mi Clip Cuenta cash deposit fees.

Each run logs whether Mi Clip shows up correctly as a consumer wallet; how often answers cite miclip.mx or the app stores compared with competitors; where the gaps are (NFC, QR, cash deposits); and any answer that raises doubts about cashback, support or safety without pointing to the official terms. Google Play and App Store reviews are checked weekly as well.

CONCLUSIONS

Being found isn’t enough anymore. Be understood.

The way people shop changed in the US first, and it’s already here in Mexico: the AI answer is the new first page, and agents like Muse already compare options and buy once the user says yes.

When people shop this way, a brand without clear pages and a consistent identity across every engine never makes the shortlist. This isn’t a product problem. It’s a clarity problem.

Mi Clip starts with things others would have to build from scratch: open access, a group behind it, solid legal standing and a real app store reputation. Its gap is identity and answers, not access.

The opportunity is already sized: 631,710 monthly searches on things the app already does, a universe where 79% of keywords are informational, and one core cluster, paying by phone, that nobody owns yet.

AI visibility can’t be bought and can’t be guaranteed. It’s built the slow way, one engine and one question at a time, by publishing the answers that don’t exist today.

Found. Understood. Recommended.
