WHAT I SAW

I asked Google and Bing about GEO, AEO and AI visibility

how to know if chatgpt mentions my brand

Google: no suggestions

The question a brand needs answered most does not get a single suggestion.

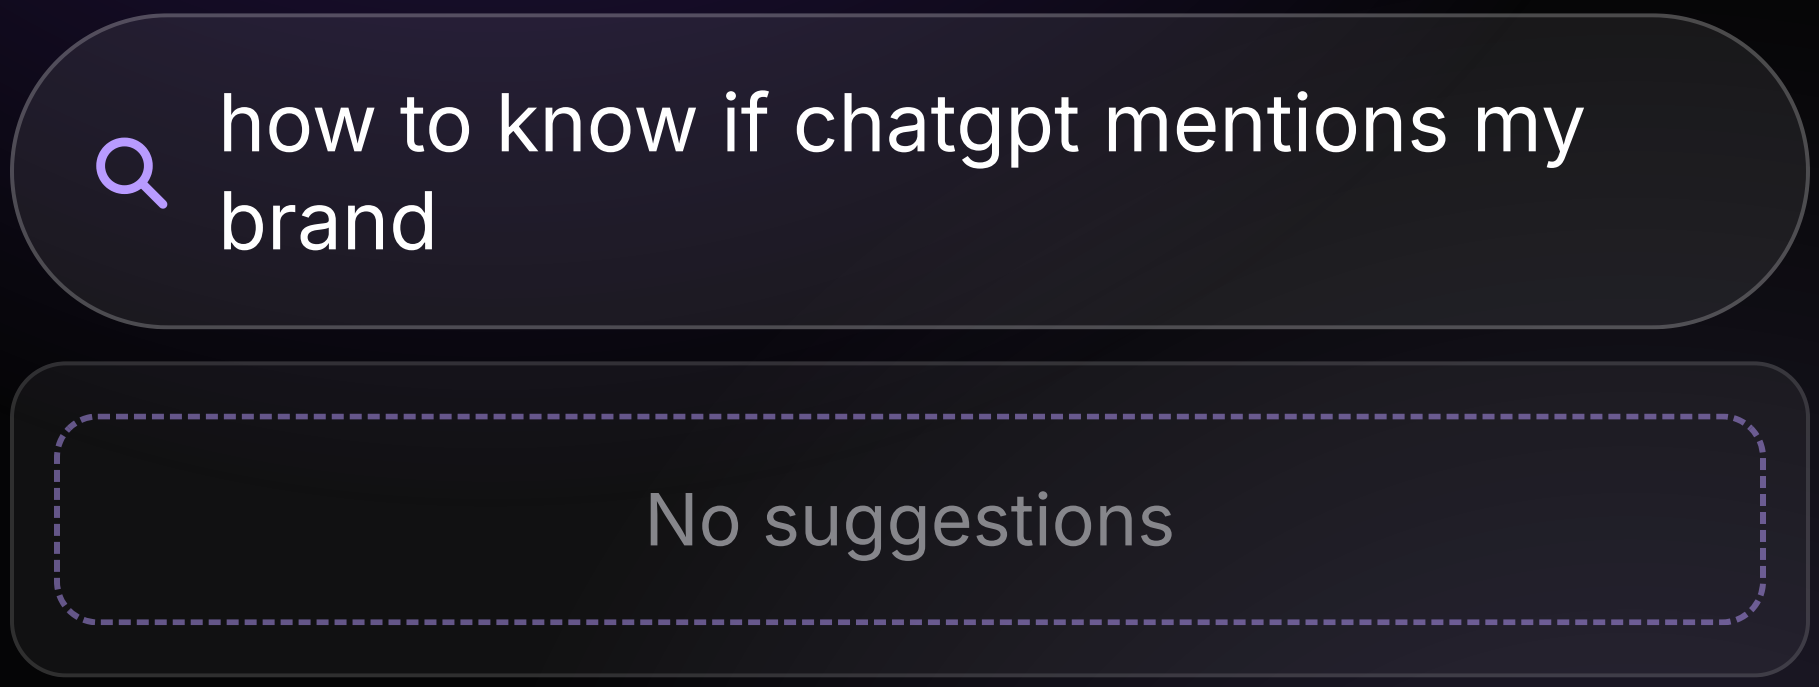

Autocomplete, signed out, no history, 28 October 2026.

Swipe →

GOOGLE · US

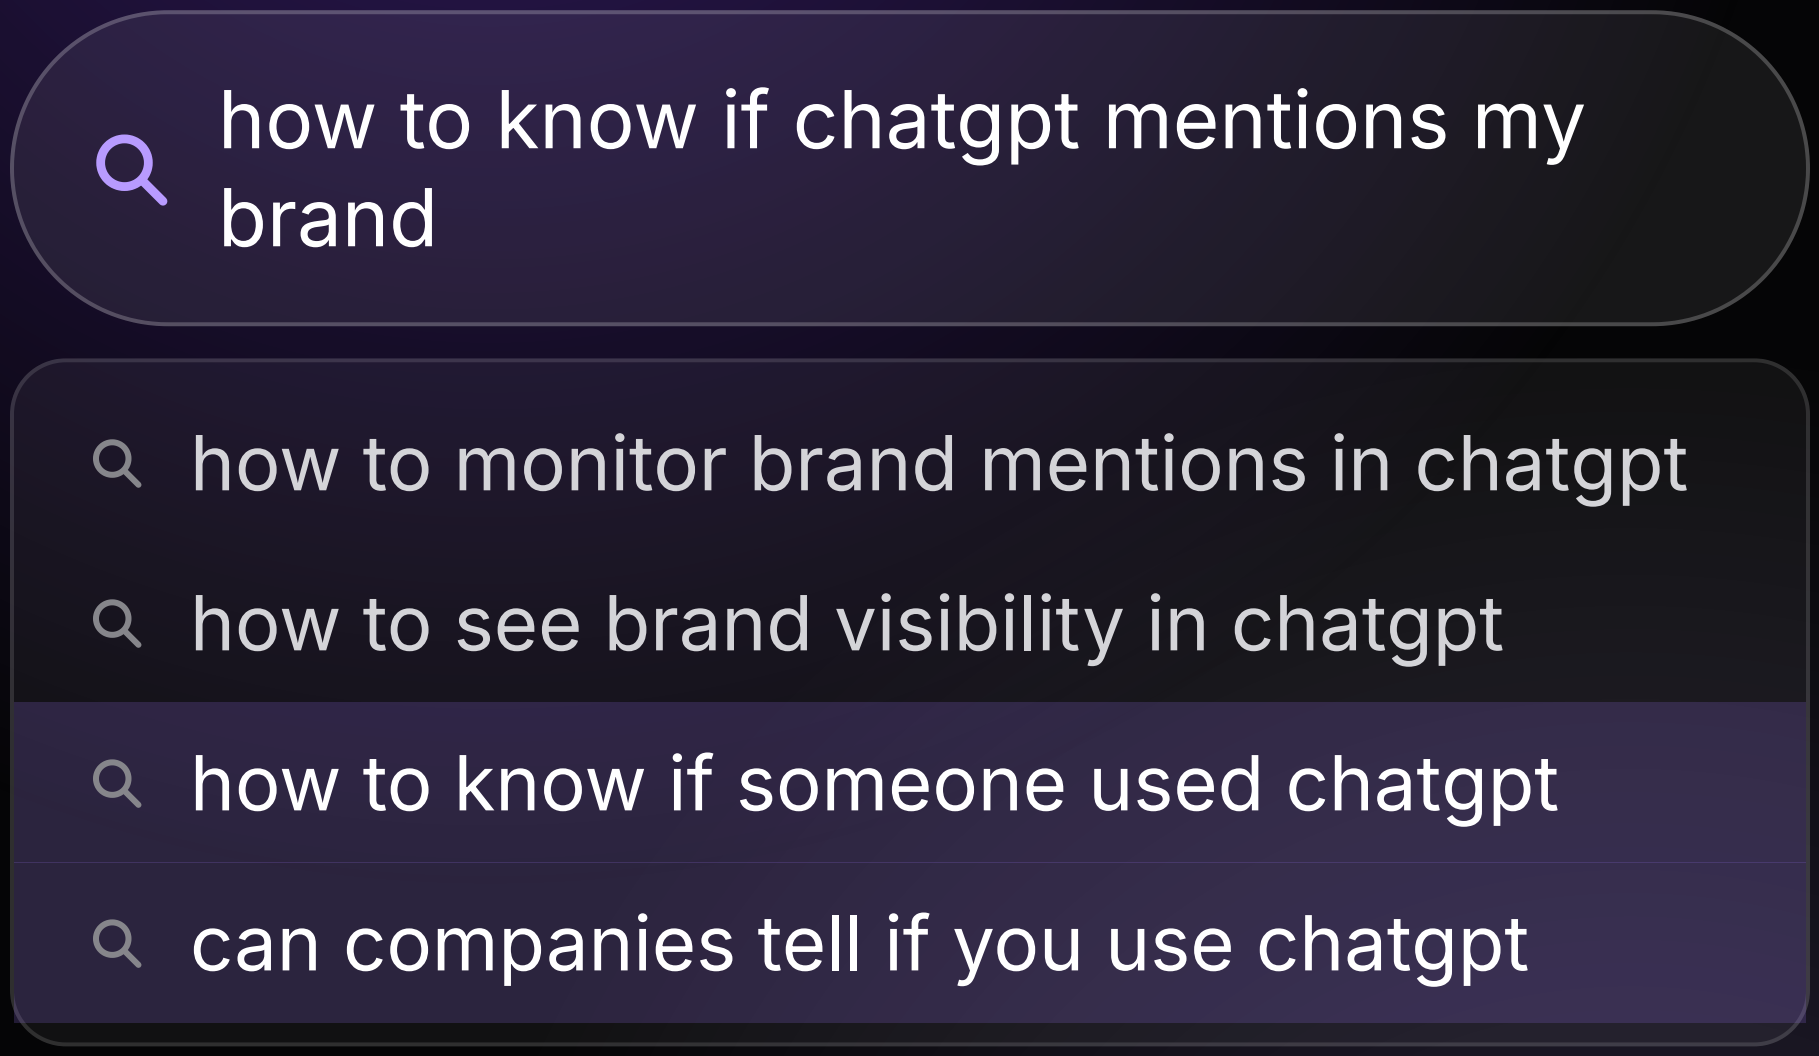

Nothing.

The question a brand most needs answered does not get a single suggestion.

BING · US

Bing splits the question in two

Half brand monitoring, half detecting AI-written text.

Ask Bing how to show up in ChatGPT

how to show up in chatgpt

does chatgpt show up on turnitin

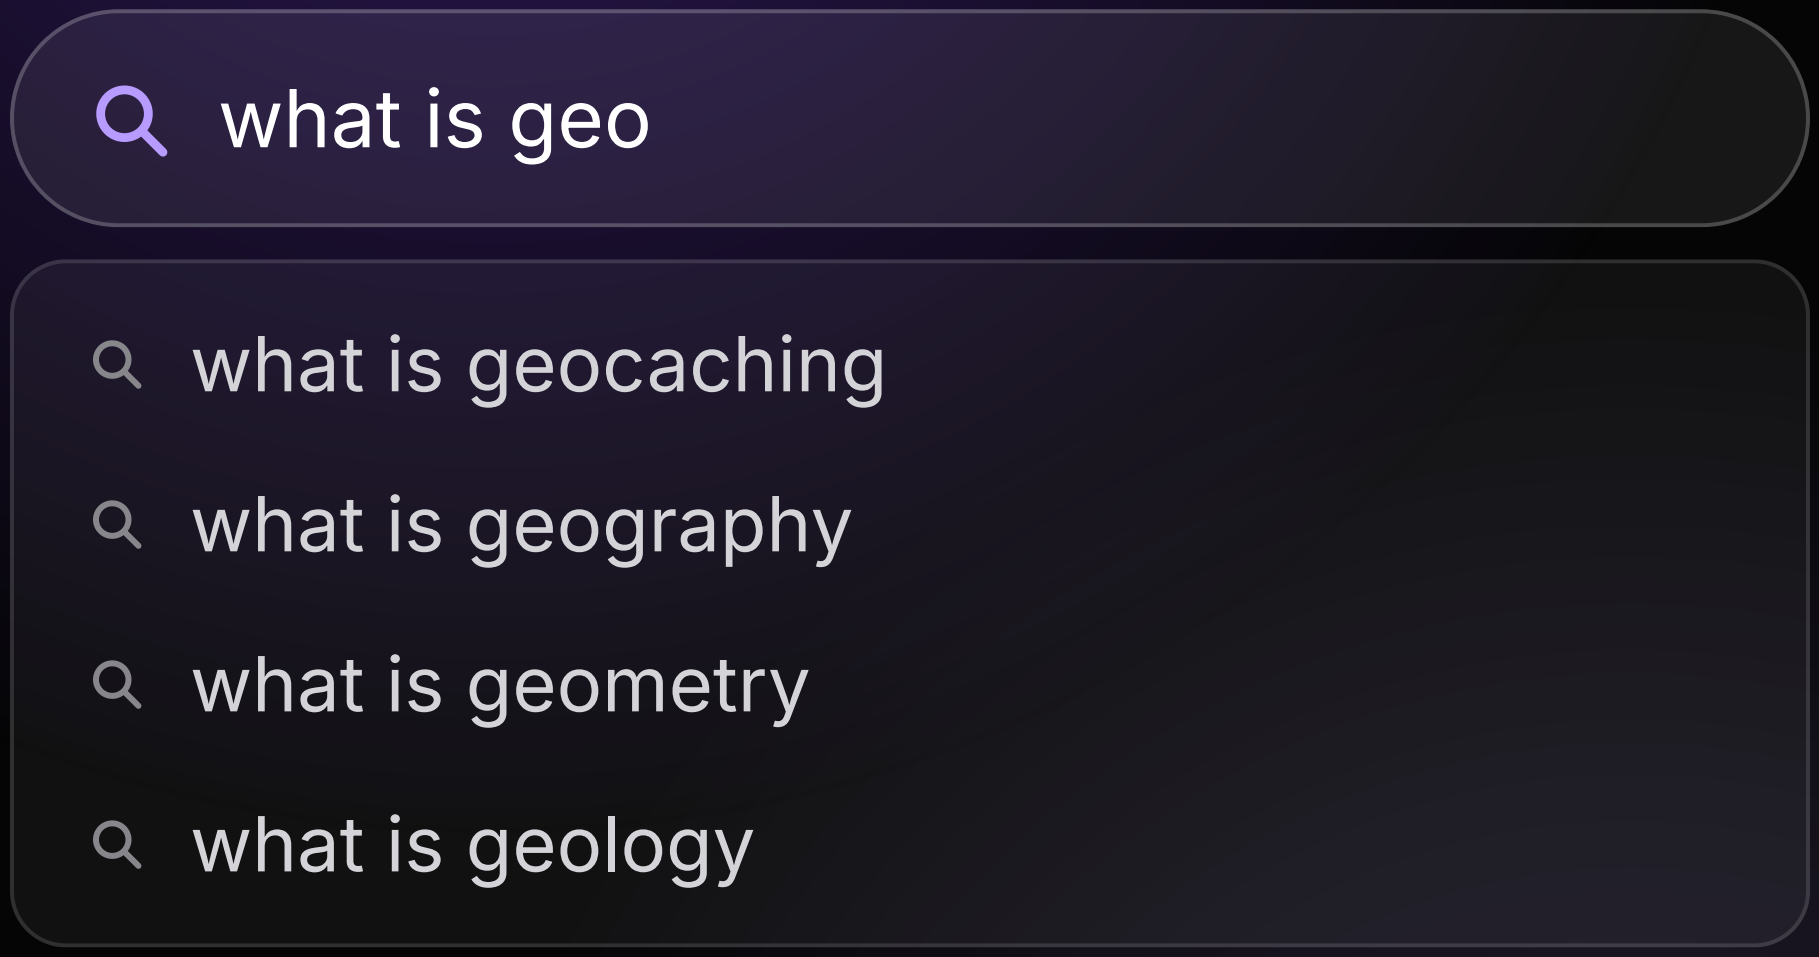

does chatgpt show up on plagiarism checkers

how to detect chatgpt

how to check for chatgpt

Google completes it as results, searches and “a winning aeo playbook.”

To a search engine, GEO is geography

AEO already got its own: “aeo vs seo” and “aeo and geo.”

Some words are already claimed

GOOGLE US

ai visibility

tools · score · checker · tracker · agency

GOOGLE US

what is geo

geocaching · geography · geometry

THE THREE ANSWERS

Answers to the ones search engines do not settle

AEO or GEO?

Close to the same task: getting an AI to name or cite you. What matters is what you measure.

How do I show up in ChatGPT?

There is no list to climb. Its crawler has to get in, and your page should answer first.

Does ChatGPT mention my brand?

Repeat your customer’s question and save each answer with its date. One run proves nothing.

WHAT I WOULD DO

This week

1. Write your service the way your customer says it, not the way your industry names it.
2. Type it into Google and Bing and note what they complete.
3. Answer it on one page, in the first lines, in their words.
4. Check again in a month: autocomplete moves.

THE LIMIT

Autocomplete is not search volume

With no sign-in or history to personalize it, it still changes with place and time. It shows that a question exists, not how many people ask it.

What does Google complete when you type the most important question for your business?
